Mdard hemp testing

Beware of Producers: Instructions for filling an industrial hemp sample Review and follow MDARD-HEMP-201908-1 Industrial Hemp Sampling Procedure (. As a reminder, you need to plan a sample drop-off time. If you have not yet scheduled your drop-off time, call the Michigan Department of Agriculture and Rural Development's customer service at 1-800-292-3939, Monday to Friday between 8:.m.m. and 5:00 p.m.m MDARD will not accept scheduled walk-in samples. When you arrive at the Wm.C. Geagley lab, you will park in the front area next to the sidewalk. Follow the instructions on the signs in front of the parking spaces: Text 517-256-6278 when you arrive with only the following: Your nameYour Business nameYour Meet TimeRemain in your car until you receive a text back with instructions on how to proceed to file your sample (s). ATTN: Customers who do not wear a mask will be asked to leave. Submitting and obeying the 2018 Farm Bill Team The 2018 farm bill legalizes industrial hemp and provides a federal framework for industrial hemp production by allowing hemp producers and processors, operating in the states with hemp legislation, to engage in commercial hemp production. As part of this, states wishing to regulate industrial hemp must have a hemp plan that has been approved by the U.S. Department of Agriculture (USDA) that monitors and regulates hemp production. The USDA intends to enact rules and provide advice to states on the development and approval of the hemp plan in time for the 2020 growing season. Meanwhile, states continue to operate under the 2014 Farm Bill provisions that allow industrial production of hemp by state colleges and universities and agriculture departments for research purposes. The Michigan Industrial Hemp Research and Development Act, Public Act 641 of 2018 came into effect on January 15, 2019. Pa 641 establishes, among other things, a licensing program for people engaged in the cultivation, processing and handling of industrial hemp. Under pa 641, anyone who grows industrial hemp or processes, handles, brokers, or industrial hemp markets in Michigan, must obtain a registration or license from MDARD. However, those who obtain the appropriate registration or licence will be able to grow, process, handle, negotiate or market industrial hemp in accordance with Michigan law. Given that the MDARD Industrial Hemp has not yet been approved by the USDA, a registration or license issued under pa 641 is not sufficient for a producer or processor-handler to comply with federal law. In order to comply with state and federal law, participation in a pilot program ag is required. LANSING, MI -- Too much THC could make entire crops useless and financially ruin Michigan's new hemp producers. If your hemp is hot, it's hot, and it has to be Michigan Department of Agriculture and Rural Development (MDARD) Legislative Liaison Nathan Kark said during a presentation of Michigan hemp agriculture to the State Senate Agriculture Committee Thursday, January 16.The federal government in 2018 legalized industrial hemp, strictly defined as cannabis sativa with less than 0.3% THC, the high-incentive compound found in marijuana. While the same plant, marijuana is usually grown for its THC and smoked or otherwise ingested for a high recreational or medicinal effects. Hemp is harvested for fiber used in tissues, paper, building materials, food and cosmetics, or for non-psychoactive compounds, such as CBD, an extract used as a natural remedy for anxiety, insomnia, depression and pain, among other ailments. Michigan passed its offer in 2019 to allow states to create their own pilot hemp breeding programs. Meanwhile, the U.S. Department of Agriculture (USDA) has been working to enact federal rules on hemp farming, some of which Michigan officials say are unrealistic. Federal rules are not yet finalized, as a prolonged public comment window remains open although January.Link to provide comments on federal hemp production rulesThis federal rules are complete, they will remain in place for at least two years. Michigan is working on its own hemp growing program that must be respected and approved by the USDA. Several federal rules of concern were highlighted at the presentation of MDARD on Thursday: The 0.3% THC limit: Although marijuana is legal for medical or recreational use in most U.S. states, it remains illegal under federal law, listed alongside heroin as a Schedule I controlled substance. In order to remain distinct from marijuana, hemp must have a negligible amount of THC. If THC in hemp tests above this strict threshold, it mustes to be destroyed. It's an area that I believe (USDA) probably gets a lot of feedback, Kark said. This 0.3% is a pretty hard and fast rule. Based on 847 samples tested by MDARD in 2019, 84% were within the acceptable range of THC, said Craig VanBuren, director of MDARD's laboratory division. Of the 603 licensed hemp producers, nearly 40%, or 242 producers, did not submit any samples for analysis last year. At this point, there is no flexibility in the destruction requirement, said Gina Alessandri, director of the Mdard Industrial Hemp Program. They stressed that they are not interested in putting someone out of the interest... She said. They said they were working with the DEA see if there was an area where there would be some flexibility to redirect non-compliant hemp for perhaps industrial purposes, such as a building material or a fibre, that sort of thing. 15 days before harvest: Under proposed federal rules, hemp growers must harvest their crop within 15 days of receiving the results from THC laboratories. The reason is that THC levels do not stagnate and can continue to climb as the plant remains entrenched, said Gina Alessandri, director of the Mdard Industrial Hemp Program. It's the USDA will receive a lot of feedback, she said. While the narrow window is a concern, particularly for large producers and the 58 per cent of farmers in the 2019 pilot program who harvested by hand, Alessandri said only 8 per cent had not met the deadline in the first year of the program. Sample collection: The Michigan pilot program allowed farmers to collect and submit their own samples for THC analysis. This will not be allowed to continue under federal rules. Probably one of the biggest deviations ... of our 2019 pilot program is that producers who were previously able to collect their samples by themselves will no longer be able to do so because we have to register the DEA or another named law enforcement person and actually collect those samples for them with the guard chain and a few additional steps in place. Kark said. ... We are deeply immersed in this internal context and MDARD needs additional inspectors at this time. We are trying to determine if there is a way to do that in existing resources. Testing Laboratories: Federal rules limit the number of laboratories licensed to test hemp. You see words like DEA, Drug Enforcement Agency, it's the federal government that does some of its oversight and says that, well, the labs have to be registered by the DEA, Kark said. Fortunately for MDARD, our Geagley Plus Laboratory in East Lansing is already DEA registered. Based on pilot program data, the laboratory was able to test and deliver results to farmers within three days during the first harvest season. Crop destruction: According to MDARD projections, approximately 16.6% of hemp crops are expected to fail THC limitation tests by 2020, meaning that these plants will require destruction. State Senator Dan Lauwers, R-Brockway, said he was a little disappointed with the way the feds came across the destruction. If a grower has produced cannabis above the acceptable level of hemp THC, the material must be disposed of in accordance with regulations (Controlled Substances Act) and the DEA because these materials constitute marijuana, a controlled substance under Schedule I under the (Controlled Substances Act), hemp farming rules have proposed. Therefore, the material must be collected for destruction by a person authorized under the (Controlled Substances Act) to handle marijuana, such as a deed distributor registered by the DEA, or a federal, state or local law enforcement officer duly authorized. Lauwers said that the most sensible thing to do would be until the crop returned to the field. Alessandri said the rules of destruction of the Controlled Substances Act are primarily focused on prescription drugs, clearly not something close to destroying the acreage. It said the USDA said it was considering providing states with flexibility in the way they demand the destruction of hot hemp. It has to be realistic, Alessandri said, and it is clear that it is not realistic at the moment. Michigan expects to finalize its own hemp farming rules by October 31. MDARD currently accepts the license hemp growers and processors for the 2020 growing season. As of Monday, the agency had received 252 applications from hemp growers and 237 from processors, a category that also includes hemp brokers. The 2019 growing season included 603 registered producers and 483 licensed processors. Introducing the hemp program to the Judiciary Committee:-- Gus Burns is the beat marijuana journalist for MLive.
